PERENDALE NZ Across-Flock: Explanation of Perendale Indexes

All indexes represent the genetic merit of the animal compared to others in the analysis and is expressed in cents. The higher the index, the greater the estimated financial return from using the ram as a sire.

NZMW+M	Overall merit for Lambing percentage, Survival, Early Growth, Adult weight, Meat Yield and Wool production
DPCR	Merit for Capped Reproduction (lambing percentage of the progeny). “Capped” means that merit is limited for sires which produce ewes with very large litter size.
DPS	Merit for lamb Survival
DPG	Merit for Growth from birth until the autumn
DPA	Merit for restricted Adult size
DPM	Merit for Meat Yield (meatiness of the carcase)
DPW	Merit for Wool weight

Explanation of Perendale Breeding Value:

WWTgBV	Estimation of the difference in weight of the ram’s progeny at weaning compared to others in the analysis. It is expressed in kilograms, and is an estimation of the value of the ram’s genetic merit for very early growth (growth to weaning)
†4.62	If the WWTgBV has a symbol beside it, there is information from molecular breeding values from DNA analysis incorporated.

December 2022

THE PERENDALE SHEEP SOCIETY OF NZ (INC)
